December

Friday 30th. Caught a severe cold. Too ill to do anything
20pts rain to 9 am

Saturday 31st. No improvement in cold. do not go out.
2pts rain to 9 am

January 1922.
Sunday 1st Cold a bit better
Weather looked very threatening
so did not go out.
A few light showers during the day.
Get through a bit of work on hand. & have a general clean up of all equipment & gear.
7pts rain to 9 am

January 1922

Monday 2nd. Morning clear but rain. Go out to the east along the foot of the hills. Found a nest of D. picata 20ft Blackwood scrub nest of 4 eggs with red & scrop.

Shot a couple of Squatter Excipita, one fit for skinning but very fat.

Put in some time after a pair of E granulina but could not get near enough for a shot.

A Horn M drooks flushed from nest 12in from ground in a tussock of grass, it contained 4 eggs. Shot the male.

Heavy rain coming up so head back. Shot a male M cinerina. Got back wet

Started to rain heavily about

11 30 am a continued rainy all the afternoon. 37 pb rain D 9 am.

Thursday 3rd. Dull & cloudy but rain has cleared off. Cecil brings the horses along. Saddle up & go out to S W. a mile & half from town. I saw a party of 4 Magpies & Titlers, wild as usual. Kept after them all the morning but only got 1 shot & secured a juvenile bird. All the Mountain Magpies "Graculina" of the district appear to be gathering about the top of Mt White a steep rocky, cone shaped hill some hundreds of feet high 1 1/2 miles S W of Town.

Set off after them, but had to give the climb best, as my cold has affected my wind. Head back again. A Sturnus albigularis and a dot, very poor specimen moulting & badly shot.

Saw another a fly a shot from 15 yds distant. Literally blew the bird to pieces, all I could find was the wings; the shot must have travelled in a solid bump.

Get back 2 pm. Lunch & skin the birds. Go out to south & ride round where I had previously seen Tarsiger till sunset but did not see or hear any of them. One of the mustering from Rutchy way; told me he saw a pair of Anthill

parrots about the 7 mile today. 340 pts rain.

Wednesday 4th. Cecil has horses along early. Saddle up & go down to the 7 mile; Robety road. Spend the day searching for the Catbill parrots. Cover a big area of country but do not see any sign of them. Trichoglossus & melanonota are pretty numerous about here but I think they have finished nesting. Watch several lots for some time no result. Bird life not too plentiful, very scattered now as there is plenty of water about.

Thursday 5th. Cecil has my horse along early. Saddle up & start off out after Mountain Magpies & Graculina. Several seen at junction of Cuen & Lachlan, but they left for the hills as soon as I came in sight. Follow them but could not get near enough for a shot. Ride up & down river for about a mile, a couple of times several birds seen, but all very wild. Get a shot at last & bring one down.

Pardalotus Melanocephalus heard calling for the first time this last fortnight. Shot 3 of them. Return, get back midday Lunch & then the birds. After I had finished go out again on foot to have another try for Stipiura

Put in a couple of hours after them but could not get a shot at an adult bird. Shot a full fledged young one, & a specimen of Eroadus hypoleucus. Return & skin them. Thunderstorms SW NE & W late in the afternoon. Heat has been very oppressive this last few days.

Friday 6th. Cecil brings the horses along early, saddle up take lunch & start off out to the paddock. Have a look at the trees where P vernicular were noted at hollows 24-12-21 no birds at them to day. Two pairs of birds flushed from near hollows in other trees. Wait for some time but they

did not return. Reach the paddock
& ride round the spot previously
marked for Turnix. No birds near
them. A pair flushed some
hundreds of yds from one
marked spot. Search well all
round but could not find any
nest. All the birds. Rhipidura
& Eopsaltria & a Venustus have
left the patch of Swamp Paperbark
country up creek from camp.
Have lunch at the camp &
go on 3 miles to another
Turnix area. Light rain.
Within sight of a marked
tree a covey of 3/4 grown
Turnix flushed. Only saw
one of them land but could
not flush it again. Search
well all round this spot
but did not see any more
of the birds. Go on to

when Brown from Coronado
buildin, 7-12-21, notes, some
head lice done to rest.
Head back again. Until next
when B visited the Dr in
Tucson this morning a search
well all round for to not
see or hear the Lions,
head for been reach there
6 pm. Nine from Mr Wells
stating Mummers had arrived
but no letters or data

Saturday 7th. Mailman in
en route go B. to Abeny
a last. Him up. He answer
me he posted all the letters
registered & ordinary with
the Lions Nine Mr Wells
to that effect.
Nine to Postmaster at
Laura asking how many

Jan 4th Mile
Registered pocket by river
wood like oak by Residence
at Lawn, fifty hard go out
with Cecil To get a couple
Nests he had found
Mr. Neal for Turnix which
he flushed this morning
while after the horses
1st nest Corinthis 10 ft
Blotched egg which I
secure with set 2 eggs
2nd nest Parudisius 10 ft
Blotched egg of Red
a hollow open Parudisius
lying on ground beneath
the nest
Put in rest of time
searching for Turnix Lark
did not see or hear any
Heard a report of Pelican
but could not find
any nest.

Sunday 8th, Fred brought my three cows. Saddled up & go out across river & work through hills to NW & pair of Prairie Chickens rose one. Walk through some good patches of country for Prairie Fowl did not see any. Fred shot a couple. Beautiful plain. Good life very scarce here. Did not see anything further of note. Came back again along the river. Saw nothing of note. Fred had 3 from here & then the Fields. Went out on foot later on but did not get anything

Monday 9th. Cecil busy
the horses alone. Intended
going out to Ruby Jack for
the day, but weather looked
too threatening & not to
risk 2 carts 16 miles
from home. Cecil rode
& Pincicotta cart at a
hellow in Mt Red 20 ft
3 Magpies Stricken
rest not seen, too
a long chase. I put a
shot at 1 right on Green
very poor specimen; the
other 2 cleared out
could not approach
again. To bring the total of
Range Birds shot to
female Pennant shot
a landed a Mt Hawk
away. Cecil also wounded
but could not find any

rent, first excellent
the next from which I
shipped. Have a fine
the birds flushed & I
fired a shot but had rather
long shot. Never, could get
shed of them. Also shoot
fat pretty good. Complete
Oct. Mackerel season, there
seem rather a poor bird
over the place almost.
Scarce a good shot
country for Partridge &
etc. Shall be very glad
when you go over up
head back to try a dodge
at last fail. Get a
strong 1 reaching [illegible]
Last 2 or. Lunch & then
the birds. Thanks for
all interest shot & hope
again here.

A native brought me in
a dozen & set of Pectoris
Labled Meandrina "Ps Meducanae"
type. He got them out
along Big Beach about 1/2 mile
Sunday which after dinner
I did a very good description
of. Did a rough sketch of them
1/2 for them.

Monday AM. Wind blowing fresh
& still raining early. Packed
left P. Survey & Jim & me
Place in yesterday. Finished
work & packed up for a
[illegible] & [illegible]
[illegible] & [illegible]
[illegible] & [illegible]

Heather looked very frightened
and had back. Even Commander
Hudson from Scott & Wilson and
staff stood by eggs. The crowds
were very keen. Short news of the
Lords.

Parliament at Town adjourned
till to-morrow.

Wednesday 28. Heard from
Murphy they [illegible] Mail
Post office Engineers [illegible]
Mined from Hyde Park to Marble
Arch [illegible] Park all
shops except [illegible] Commander
called in to say [illegible] Bore
[illegible] Few [illegible] of
small [illegible] [illegible]

X lost in transit

Monday 12th Very ill
Received letter from
3 boxes unopened letter.
Ill all day
Out on duty all day
& night & nothing for
Tea & Rations.
Heard shells very near tonight
Fortunately O Kool was asleep
Hello ca Lord.

Friday 13th Very ill, had
to lay up. Temperature
Severe pains in head &
back. Aching pains in
all muscles. Pins & needle
feeling in arms & legs.
Nearly Everyone in Camp ill
Medical staff up with flu & complaints
to a couple of days. Seems to
be a form of Influenza.
Many Casualties Wounded

Saturday 16th. No improvement
Temperature 101.2 Expected
feeling in chest. Very sore
throat, lobe of ear
ulcerated.

Sunday 17th. No improvement
Night sweat Temperature 101
Head & chest very bad. Severe
pain in back. Cough & sore
throat. Pneumonia. Heart
affected & bad night

Monday 18th. Back a very bad
night. Had shivering fits
this morning. Head & chest
very bad. Right lung again
with Pain. Temperature 101.2

Sunday 17th. Feel a good deal better. Pain in head & muscular pain gone. Weak & tired & feel a good deal easier.

Wednesday 18th. Complaint has developed into a very heavy cold & expectoration comes.

Thursday 19th. No improvement as yet.

Friday 20th. No improvement.

Saturday 21st. No improvement.

Sunday 22nd. Slight improvement.

Monday 23rd. Slight improvement.

Tuesday 24th. Slight improvement. Sat on chair in morning. Ate a cracker & drank a little milk & water. Still very weak & tired. Rested fairly well. Received letter from Mrs. Hall & received the enclosed reply which we sent off straight away. Letter from Redmond Day

×

Wednesday 25th. Not much change, head feels rather swollen. Nurse Dixon left. Nurse Hall suitable leaves. Nurse from 4 to 8 pm. Received letter from Mrs. Hall & Mrs. Holmes & Mrs. Holmes expecting a cheque & Mrs. Pitcher's invitation, too late to reply.

nest in elk. So along up the
Sandy. Found nest of
Wilson's Thrush containing 2
eggs. 5 of them sitting on
a bushy tree. Found elk
Track the same between
the Sandy & the Hills.
Killed Jeay & Sapsucker
Shot from a tree in which
Male was in company of
Lady Looking young. Found
egg of Woodpecker. Left Hills

letter from my niece from
Ft. Wick.

seen. Nothing else of note
seen. Left Sask 3 p.m.

Sunday 29th. Fine cool days
my labor day. Left
Sask early & fine weather
since. Sent first 3 pairs.
Visit a couple of hives
when I had previously
seen P. Bruneau at Hollows
in regard to birds about the
5th day. Bird Sanctuary not
done first 3 days. 3 pairs
P. Bruneau seen at
Hollows.
1st pair shucked from 2/11
a Hollows dry-yard in a
cabbage green, limb tied
but could not examine
it. In about 10 minutes
both birds returned to fix
but did not go to Hollows

the
they flow off again, repeat
fourteen 20 minutes, until they
flow not brown.
2nd Pour in hot water setting on
a day 20 ft Mfn Ash. & complete
10 minutes time it make
come out & repeat & until
water flow off clear
keep & examine it. Seed
may rather varish heat not
hollow, the seeds are
double, a hollow on the
seam covered in about four
thirds height a hole below
the crease one & generally
a pinhead shaped piece
about 4 in
Jack. Pare flesh from kidney
shape round & off the bone &
save. Heat for Lobster sauce
Put they heat with water

6 A.M. Rain stopped from day previous
80 ft Pole Ext. Heat for half an
hour but they did not return.
9 A.M. Can see a thing or
two around 40 ft Pole Ext. Re-
mains approach the others comm-
enced to return in groups of
both flew off. Climbed up
& examined bottom of
6 in deep, 6 in wide in
bottom, and it was full
there was 20 eggs. Birds
returned while I was up
five & after 8 got down
both went to ground & were
starting about as soon as
bottom when I left.
6 A.M. Rain stopped from
day previous 40 ft Pole Ext.
Heat for half an hour but
they did not return;

7 M. Saw Hooded Merg. flying
upward 25 ft. N.W. Cor. Island
very low over Bay appeared
to fly very fast.

8 M. Saw Red Throated Div. upward
30 ft. N.W. Cor. Island not alarmed
at me.
Pursued Merg. Hooded from
west S.E. Cor. Island. Hooded
flew by & I secure upon it
with 7 drops but unfortunately
broke it. Found Cedar
very fine salmon scale
in four first Hooded upon
examination by me.
Saw many horned & Pied-billed
Grebes. Shot Hooded from
a flock upon S.E. Island
which I could not find
examine it.
These birds are very

plentiful and this way
a can nearly all found
Jp. Saw 1 thrush a
couple of pied wag &
Turnix crake but did
not see any. A pair of
Sacro Ibis flushed. No
news. Set back a bit by
very bad headache.

Monday 20th. Fixed packing
up, shifted stores out
of paddock but weather
looked too threatening.
Middday it started to blow
a gale from NW & came up
very black, heavy storm but
did not last long, cleared
up later on so I got
to S.W. to look for D
merganser. 2 pairs seen
at bottom of 20ft Creek

The other 30 ft Main End
needs appear suitable for
Nursery places, seeds have
been sowing of both.
Nursery over of roots.

Monday 8th Frosty early
Tuesday 9th Should have
shred to 2 m. Nursery places
& sowing both kinds of peas
Thin & weed up.
Heads up & start off mid to
Kitchen Road Weeding mangold
Mid Pasture & Wheat.
Mixed Pasture Mow 4.00 pm.
Weighed & put on scrap
Then proceed to load pea haulm
to stack near Road near Mr
Leeds Pea Sowing Seed mixed
round Pit marked spot. Start
one carting, finished carting
Seed sowing & Hand off &
Top & Tail Seed mixed

February

from Wilmington
from 1 to 6 P.M.

rose up above the horizon
& disappeared from view
shortly after reaching
the meridian. Cloudy
one & more again, all
night long and I slept
but little. Cloudy, rainy
& windy all round. The wind
last could not travel any
more. Bag & Tyson left Campbell

February

Wednesday 14th Turned out
at daybreak. Tommy Hays the
hero story. Breakfast a
saddle up. Rode and dismount
& led for Buenicados. 12 miles
from camp a small flock of
M. pectoralis (Wood) drew across
some long sweeps from.
Cross Scrubby land & reach
Mungo a 2nd Nat Driver
from country. Buenicados

Locally numerous here, but
none seen at Bellevue. C
septentrionalis also numerous
& flushed from nesting bottoms
at Bellevue & St Rose Dam & agg
Bellevue dam, depth of St. below
dam.

scattered Cattle Tracks, Pitch Rock
& River frame along the creek
& miles & miles.
miles from camp & saw opposite
Precipice at a bottom on a
River frame, was making down
when I heard a strange call
in the ridge, and I left the
at. & the mate the call a
couple of times. Stalked to
spot, found a shot at a
female. Search well around
the spot but could not find
any nest. Examined the whole
Isaac Precipice, couple of
hollows but neither appeared
suitable for nesting place.
Further on a pair flushed from
a dry gully [illegible] Stalked
eyes.

[illegible] the ground [illegible] was very rotten inside & not originally hollow, but the birds had drilled out a hole about 6 in. deep & with probably most of it. Work round it & [illegible] I had previously marked for [illegible] they [illegible] one, after a few feet - [illegible] again could not find it again. Heard [illegible] sound above but could not find any. Heard another call about 150 yds away. Tried to [illegible] it, but failed. Repeated [illegible] but I feel would not reply. Work [illegible] [illegible] [illegible]

in here any of them to look upon to the other place & have a further search for the Lord but could not find in here any. Pair of Pumpkin & Bunch of Cabbage grow up. Heads have been biting out of corner of Letter may neither Return Reasons received from Shin Te Terrain, it appears to be a Rotting Land.

Thursday 22nd. Terra cotta Stopped, Morning Evening. The Service also Sabbath as in Portuguese the others Stopped. Heard a Voice of Mosquitoes, Scratching Closely all Never the Capital Heart could not find any Rest. In Fields Afield, the Jew Bondmaidens

seen. Shot 6 of them. Co P
shot the last a mule running
finished 1 fell off about 100 yds
could not find it again.
Heather heard calling about
100 yds away. Could not
locate him. No loss.
Heavy rain coming up
Head back to camp, reached there
about 11 a.m. Took breakfast
~~and then to bed~~ Started
to have pretty hard time followed
by heavy rain which continued
for about an hour. Then it
cleared, heard shots from right
front place where Pvt Mc
Cowan [illegible] scouting party
reported [illegible] 1 1/2 miles away, heard no
more. Started over after
[illegible] could not find it
again.

so along Windsor I flushed one yesterday. Heard all round, no birds seen or heard. Down the river I heard one Water Rail squealing, Rallus aquaticus in the reeds. I heard one calling. Sat Nov 1st I called a couple of times again but I could not find it. Another calls not quite same, I may try to find him one, when first started to call again he ran a short a bray it along. Some time afterwards the second bird started to call again, it was shifting about a good deal, eventually I found it about 150 yds from where I was standing, I crept up to it, found it was a male, I got within 5 yds of it, it was not at all shy, I watched it for some time, it was feeding on the reed beds, it was very busy, it would run a few yds, then stop, then run again, it would then stop and look round, then run again, it would then stop and look round, then run again, it would then stop and look round

in a rather hard. Hours
employed by making fruit nest
when Robert H.

Friday 3rd. Fine and England Bradford
[illegible] to Abbey & other Robt
Turner yesterday. Found a normal
Wrekin & found second bird
each & then crossed a Tit's 30
x 100 yds from where Robert & myself
to bed. Found one whole bird
bird called a return 2 Hundred
& Ten or Each.
Ex pair of Pomatorhinus and common
in Hedges in Orchard.
2 pairs of Wrens nesting in old
Mistletoe, no eggs.
Go further afield. Riding Turner
along an Ridge & Turner flushed
within a few feet of each other
one a Male, watch & have for
hundred & ten not after him

but could not flush him again.
A couple of the females heard
call once. Did not try for
them. Head back to camp.
Penny spot where I shot the
Cutaway I saw another pair
shot one, a young pair, the other
disappeared. I failed to
see it again. Shot a couple
of Quails, one in good
plumage. Got back from
lunch a thin birds. Quail
very fat. Shot a few quail
near camp. All body hunted
about a in poor plumage. They
will figure on the Menu tonight
After lunch go out & reduce 2
saw Sunrise Tuesday. Had 2
birds 20 yds from where I
shot the bird yesterday. Both
appeared to be females. Search
all around spot no nest.

Week through a further run of
good counting but did not run
every more. Shot a pair of
varieties a return. Heavy shower
of rain and had cover for half an
hour. Left back 6pm. Eleven birds
Female eggs a variety good
Looking to become a keeper, male
birds which go to Church Mr Hanson
keeps.

Saturday 4th. Fine and daylight
Mr Hall's birds up. Found Tommy
in the same for some weeks ago.
Took them back to get the eggs of
eggs keeps until Tuesday. Finished
3 eggs. [illegible] Left [illegible]

noted at bottom on left bank.
On way back a pair of Turnix
were seen at bottom of the Common
near Pomathura. Found a good
area of country for Turnix but did
not see any. Saw a bustard on the
beach. Many waterfowl resting
on the sand on south side of
island. Saw a couple of pairs of
Pratincoles round about
Mtn Ash. did not examine them.
Found the Turnix nearly
in about half an hour. Heard
one calling. Took a short walk to
search for second quail. Heavy showers
damp. Ride round again. Found a
Turnix probably
flushed. Very thunderstorm coming
up. Had just to camp. Rain continued
6am overnight. no; rain continued

[illegible]

was hunting around when I heard one calling about 150 yds away. He kept replying when I crawled closer & I was able to get within a few feet of it. Another heard calling close by. In a few minutes I saw a female running through timber with a male in pursuit. Both of them were uttering a low chattering chip chip chip chip. They went into the tree again & I could still hear the chipping note in a few minutes a totally different call was uttered a low trembling gug gug gug gug rapidly uttered for 3 to 5 seconds; this is probably the call of the male. I waited for some time but did not see them again. Did not try to shoot them as they are probably nesting here. Before it became so wet & cold I Pauluccatus was a reliable guide to the birds. After heard I got out to

another Permian locality & spend a couple of hours scrambling around but did not see or hear any birds. Found a nest of Dasyornis 20 ft. N.E. of track. Secure 2 eggs and a compass about female. Took a couple more. Decided to return & Min Lewis & myself started to walk leisurely & continued till about 7 p.m.

Wednesday 7th. Left Mrs Lewis & Stephen at Mary Pharmacist & Co. Mrs Lewis & myself proceed to Ingomar & commenced hunting for parrots. Called at [illegible] miles. Make a fire & prepare lunch & tea & eggs. Heard the Kingparrot & nailed up nest & decided to call for it on the homeward journey. Left Ingomar at 2 p.m. 27-1-22. Reached Mr Lewis & camp about half the afternoon was spent.

Thursday 9th. Wait for breakfast then set off for camp. Several parties Prussian seen at different points on the way. Examine 8 or 10 eggs. Reach camp at 11 a.m. Lunch, then go out to look for Rhipidura fuscata about half a mile from camp, in a spot where I had always seen them. They were absent today. Secure 4 nests of Prubrecatus return & dine then off to Flat finished Breakfast & leave 8 a.m. for Turin Tuesday. Rest in a couple of hours waiting about the spot but did not see or hear any. So to another locality & search around till dark. No luck.

Friday 10th Leave camp at daylight Breakfast & go along Rubicon & Yarra Yarra Tuesday. Rest in a couple of hours searching about

round the locality & at last found one cabin about 100 yds from where I had seen them before. The trail was missing about a yard that did not show as much any others so along the road for a couple of miles & when I had previously seen R. Brewster. Saw a shot & I called on a surround. Heard back toward Pendalton cabin, afternoon I left to my previously track, heard a shot at Head camp then found Jefferson with round & Francis Brewster but did not see her. Then again left Jefferson
